

# PHOENIX™ 2.5 PROGRAM CONTROLLER. CERE-25

The Phoenix™ 2.5 Program Controller (NSN: 5855-01-452-0079) is designed to support the command coding of one or more Phoenix 2.5 Beacons (NSN: 5855-01-452-9877) with speed and precision.

Simple to operate, the user attaches a Phoenix 2.5 Beacon to the Phoenix 2.5 Program Controller and inputs the beacon signal code via the programmers coding button. The completed code is loaded to the beacons default memory where it can only be modified or erased using the controller ensuring that the coded signal is maintained and not inadvertently modified or deleted during operations. The Controller is powered by a common 9-volt battery and is easily mastered by the operator.

Phoenix 2.5 Program Controller is the ideal way to accurately preprogram the Phoenix 2.5 prior to mission.

---

## Phoenix 2.5 Program Controller Specifications

Weight	85 Grams   3 ounce (with battery)
Size	57mm x 95mm x 32mm   2.25" x 3.75" x 1.25
Battery	Common 9 volt
Switching	Power and Coding Button
Options	Phoenix 2.5 IR (902311IR), Phoenix 2.5 Red Training Model (902311R), and Phoenix 2.5 NV Green Training Model (902311G)

## Phoenix 2.5 Beacon Overview

Weight	28 Grams   1 Ounce
Size	38.09 x 15.87mm   1.5" x .625"
Battery	Common 9 volt
Configuration	3 Light Emitting Diodes (LED)
Coverage	240 degrees x 360 degrees
Function	Programmable infrared signaling beacon with the ability to store two user defined six second encoded signals. Designed for use during low light operations.
